

In the name of Allah

Getting to know the natural mineral biochar of Kerman mountains

Kerman natural mineral biochar Kohbanan Kerman natural mineral located in Iran, which is the only natural biochar mine in the world, and all biological materials and other related matters have been fully identified and registered. Due to its stable nature and unique natural composition including microorganisms and elements; It has a unique structure and has many applications in different fields such as agriculture, animal feed, human food supplement, medicine, environment, so that even space agriculture has been made possible.

By Mr. Engineer Mohammad Majidi KouhBanani

A review on the natural mineral biochar structure of Kerman mountains

Rich in biological substances

The natural structure of Kerman natural mineral biochar It regenerates

Porous texture

Its porous texture maintains moisture and effective aeration in the soil and promotes plant growth.

Microbial habitat

It provides a supportive environment for beneficial microorganisms in a safe and sustainable manner and contributes to the freshness and fertility of the soil.

The importance of biological materials in the natural mineral biochar structure of Kerman mountains

Stable structure

The sustainable nature and unique natural composition of the natural mineral biochar of Kerman mountains includes microorganisms and elements.

Conserve nutrients

They play a vital role in preserving valuable nutrients, ensuring sustainable fertility in the natural mineral biochar of Kerman mountains they're playing.

Advanced structure

These materials are the structural integrity of the natural mineral biochar of the Kerman Mountains improves and increases its overall efficiency in various applications.

The effect of biological materials on the natural mineral biochar structure of Kerman mountains

1

Rich in nutrients

Biological materials provide various nutrients to the natural mineral biochar of the mountains of Kerman. They induce and strengthen the strong growth of the plant.

2

Microbial activity

They create an environment that supports beneficial microbial activity, which is critical to soil health.

3

Long term sustainability

These materials have a long life and sustainable efficiency of the natural mineral biochar of Kohbanan, Kerman in agricultural and environmental applications, soil amendment and pollution removal guarantee.

Advantages of using **natural mineral biochar** from **Kerman mountains** in different applications

1

Soil enrichment

It increases soil fertility, texture and structure to improve agricultural performance.

2

Environmental reform

Facilitates the remediation of contaminated soils and promotes environmental sustainability.

3

Absorption of greenhouse gases

It helps ameliorate climate

The effectiveness of the natural mineral biochar of Kerman's mountains

Increase product performance

Future prospects and research opportunities in this field

1

Innovative applications

Innovative applications in sustainable agriculture, environmental protection and materials management, space agriculture, medical cooperation, fire fighting cooperation and fire control in forests internationally and other cases .

2

Interdisciplinary collaborations

Promoting interdisciplinary cooperation to advance natural mineral biochar technology in Kerman mountains and its integrated use.

3

Global Sustainability Initiatives

Participating in global sustainability initiatives aimed at increasing soil health and combating climate change.
