

In the name of Allah

Soil amendment using Kerman natural mineral biochar

Soil amendment is one of the most important topics in agriculture. using _
Kerman natural mineral biochar The natural mineral of Kohbanan Kerman
is considered as a natural and effective solution to increase soil
productivity and sustainable agriculture.

By Mr. Engineer Mohammad Majidi KouhBanani

Soil problems and solutions for its correction

Destruction of soil texture and structure

Agricultural soils may be degraded due to excessive use of fertilizers and chemical compounds. Application Kerman natural mineral biochar one It is one of the sustainable solutions for soil improvement

Intensive tillage, destruction and erosion of soil

Decreasing soil quality can cause a drop in agricultural indicators and a decrease in crop production. Kohbanan mineral bio-natural is an efficient combination for soil regeneration and fertility

Neglecting soil conservation

Preservation and care of the soil is very important in the process of implementing agricultural development programs, which will be achieved by using the mineral biodiversity of Kohbanan.

Biochar

Properties Kerman natural mineral biochar To Soil Improvement

1

Increasing soil microorganisms

, the natural mineral biochar of Kerman Mountain can accelerate soil regeneration and increase soil microbial activity.

2

Absorption of moisture and food

Absorption properties Kerman natural mineral biochar It makes the soil containing this substance better retain water and nutrients and prevent their loss

3

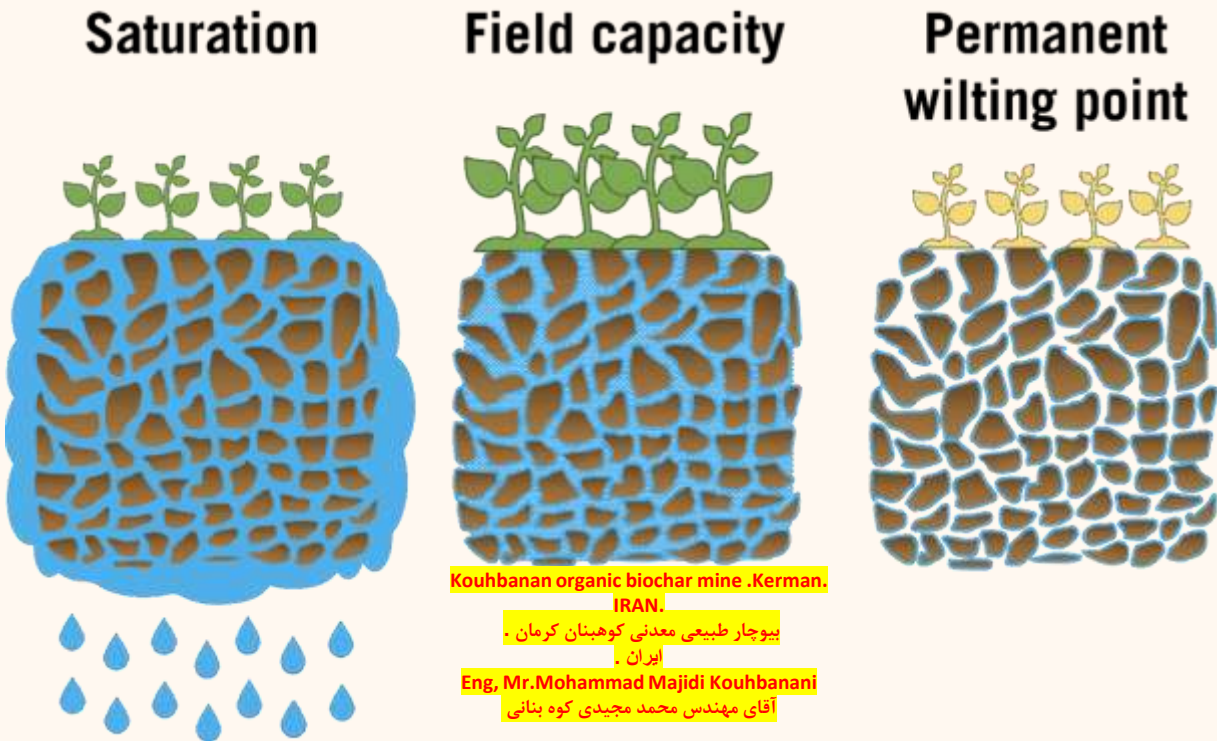

Soil pH balance

Kerman natural mineral biochar It can improve the pH of the soil from a physicochemical point of view and create a balance in the soil

The effect Kerman natural mineral biochar On Physical and chemical properties of soil

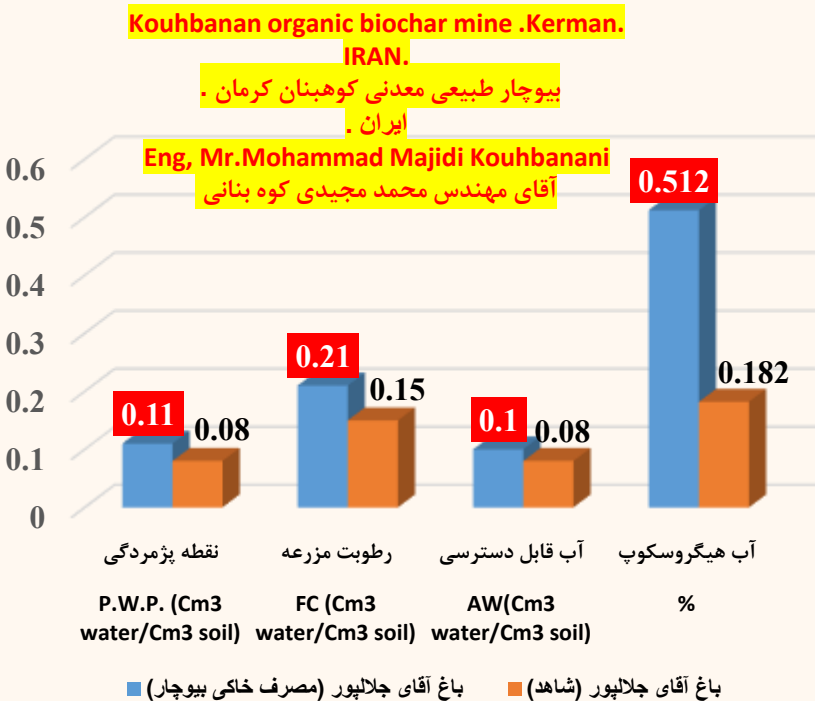

Effect on physical properties

using _ Kerman natural mineral biochar **As a biohydraulic material**, while improving water-soil relations, it leads to the improvement of soil structure and increase in permeability, preservation and productivity of water resources.

Effect on chemical properties

Presence Kerman natural mineral biochar At Soil increases the storage of nutrients and soil fertility and also reduces soil erosion

Tmpact Kerman natural mineral biochar On Sodium absorption ratio (SAR)

Decreased sodium absorption rate

using _ Kerman natural mineral biochar It can reduce the rate of sodium absorption in the soil, which helps to improve the quality of the soil and make it suitable for agriculture.

Maintaining sodium-potassium balance

using _ Kerman natural mineral biochar Improves the sodium-potassium ratio in the soil and prevents its disorders

the effect Kerman natural mineral biochar On Soil fertility and plant access to nutrients

1

Increasing soil fertility

Kerman natural mineral biochar It increases soil fertility and improves plants' access to nutrients

2

Improving plant access to nutrients

using _ Kerman natural mineral biochar It can improve the access of plants to nutrients in the soil and prevent the lack of nutrients in plants

Results from the use of Kerman natural mineral biochar To Soil Improvement

1

Increasing the production of agricultural products

Kerman natural mineral biochar As a natural and sustainable solution, it has the ability to increase the production of agricultural products, which also leads to the improvement of the economy of local communities.

2

Reducing the use of fertilizers and chemicals

Kerman natural mineral biochar As a natural solution, it can help reduce the use of fertilizers and chemicals and help preserve the environment

Soil amendment using Kerman natural mineral biochar
