Application Kerman natural mineral biochar At Control of plant pests and diseases

Foliar spraying and soil application Kerman natural mineral biochar as An organic compound compatible with the environment and a rich source of biological factors is used to strengthen the defense system of plants, and by affecting the activity of enzymes and strengthening the plant membrane, it increases the resistance of plants against pests and diseases.

By Mr. Engineer Mohammad Majidi KouhBanani

Soil application and foliar spraying Kerman natural mineral biochar Natural in stimulating the production of secondary metabolites

Production of secondary metabolites

Soil application and foliar spraying Kerman natural mineral biochar leading It stimulates the production of secondary metabolites that increase the resistance of plants against pests and diseases.

Induction of resistance in plants

Kerman natural mineral biochar From Effective ways act as an elicitor and stimulate the production of secondary metabolites as a defense mechanism that increases plant resistance to pests and diseases.

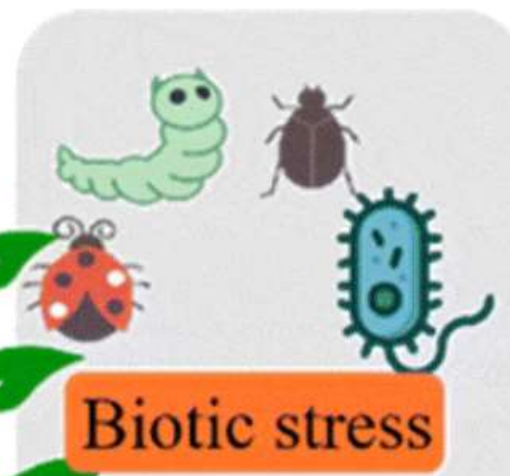

Providing nutrients and increasing plant resistance

Plant nutrition and soil amendment through soil application Kerman natural mineral biochar And also sprinkling plants with Kerman natural mineral biochar leading It leads to the production of secondary metabolites that increase the resistance of plants against pests and diseases.

Systemic resistance
Defence Enzymes

Increase effectiveness
Phenolic content

Proline mechanism

Application Kerman natural mineral biochar Natural mineral of Kohbanan in plant pest control

Sucker pest control

by using Kerman natural mineral biochar The natural minerals of Kerman mountains can control sucking pests and reduce damage to plants

Kerman natural mineral biochar Natural by affecting a wide range of sucking pests including aphids, psyllids and chainworms by reducing the population growth rate, controls these pests.

As an example, the common pistachio psyllium control

Management of wood-eating pests

Kerman natural mineral biochar The natural mineral of Kohbanan Kerman is effective in controlling wood-eating pests through various biochemical reactions and can be used in the integrated management approaches of these pests.

As an example of pistachio wood-eating butterfly control

Benefits of using Kerman natural mineral biochar Natural Minerals of Kerman Mountains

Reduction of chemical toxins

using _ Kerman natural mineral biochar At Planting plants reduces the consumption of chemical pesticides

Organic product production

The effect of enriching the soil and stimulating the production of secondary metabolites leads to the production of organic products

Removing residues of chemical toxins in the product, soil and plant organs

using _ Kerman natural mineral biochar To The reason for the biological and bacterial characteristics as well as the absorbent nature of the composition leads to the removal of chemical poison residues

the effect Kerman natural mineral biochar Natural mineral in removing residues of chemical toxins and heavy metals in the soil

1

Removal of chemical residues

Kerman natural mineral biochar The natural minerals of Kohbanan purify the soil and improve its quality by absorbing the remains of chemical toxins

2

Removal of heavy metal residues in plants

using _ Kerman natural mineral biochar In the soil, it leads to an increase in the absorption of nutrients and a decrease in the absorption of heavy metals in plants

3

Removal of pollution in water and soil sources

Kerman natural mineral biochar The natural mineral of Kerman mountain minimizes soil and groundwater pollution by having diverse microorganisms and unique absorption properties.

Application Kerman natural mineral biochar At Management of plant diseases

1

Prevent the activity of pathogens

Also, by increasing beneficial microorganisms such as mycorrhizal fungi and certain bacteria, they can suppress the growth and activity of plant pathogens.

2

Increase the immunity of plants

Kerman natural mineral biochar With Creating a suitable environment for the growth and development of the defense system of plants prevents diseases

using _ Kerman natural mineral biochar It strengthens the defense system of plants and prevents the transfer and penetration of pathogens to healthy plants

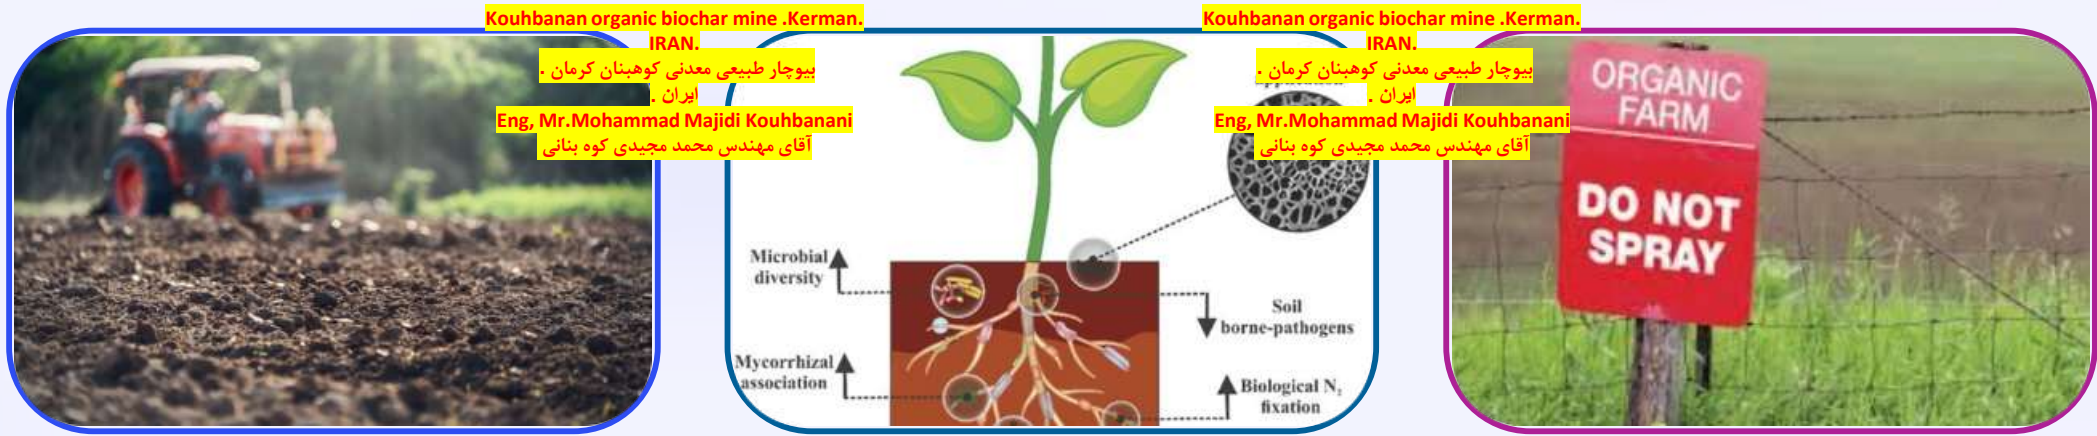

3

Conserving nutrients and strengthening plants

Kerman natural mineral biochar By increasing the availability of nutrients for plants, it increases their resistance to diseases

By improving soil structure and maintaining moisture, the natural mineral biochar of Kerman hills It can indirectly increase the health of plants and protect them against plant diseases

using _ Kerman natural mineral biochar Natural mineral of Kohbanan Kerman for the production of organic products

Production of organic products

using _ Kerman natural mineral biochar The natural minerals of Kohbanan as a rich source of mineral and organic elements cause fertility and high quality of organic products

Increase the resistance of plants

Feeding plants with Kerman natural mineral biochar The natural mineral of Kohbanan Kerman contributes to the resistance of plants against diseases and pests and to maintain the health of plants

Reducing the use of chemical pesticides

using _ Kerman natural mineral biochar The natural and mineral nature of Kerman's mountains in agriculture leads to a reduction in the consumption of chemical poisons and the production of organic products

Application Kerman natural mineral biochar To reduce the consumption of chemical pesticides and produce organic products

Kerman natural mineral biochar normal

organic products

Reducing the use of chemical pesticides

Increase the resistance of plants

Removal of chemical residues

Better quality and size of products

Removal of heavy metals from soil

Maintaining the health of plants

Increasing the utilization of plants
