

In the name of Allah

the effect Kerman natural mineral biochar On Increasing vegetative and reproductive growth of plants

Kerman natural mineral biochar It is a completely natural compound that can have a significant positive effect on the vegetative and reproductive growth of plants. With its unique properties, this mineral from Kerman mountains improves the plant growth environment and increases productivity.

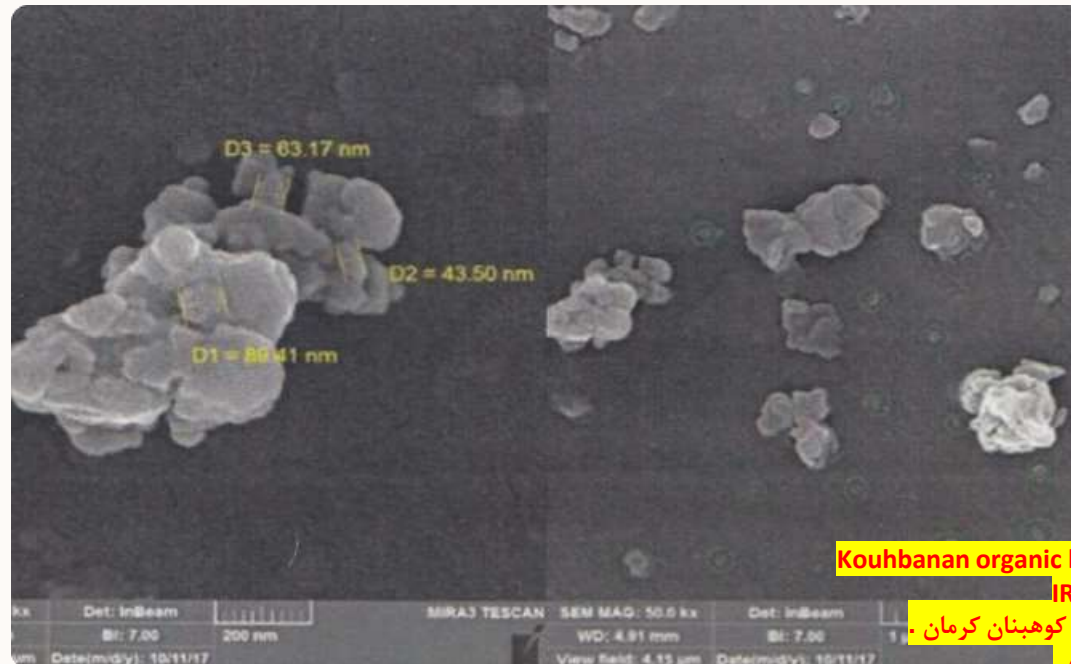

By Mr. Engineer Mohammad Majidi KouhBanani

Improve soil quality

The natural mineral biochar of Kohbanan Kerman improves soil quality and accelerates plant growth by increasing soil porosity and maintaining moisture

Increase root volume

Increase the use of Kerman natural mineral biochar It causes the roots of plants to grow and in this way allows plants to absorb more nutrients

The effect of natural mineral biochar of Kerman mountains on plants

1

Strengthening the stem and leaves

Kerman natural mineral biochar It strengthens and thickens the stem and leaves of plants, which increases their yield and quality

2

Maximum absorption of nutrients

Kerman natural mineral biochar It leads to an increase in the absorption of nutrients needed by plants from the soil and increases their reproductive growth

3

Resistance to environmental stresses

By reducing environmental stresses such as thermal stress and soil salinity, natural mineral biochar of Kerman mountains It increases the health and performance of plants

Soil application and foliar feeding with foliar spraying Kerman natural mineral biochar

Creating optimal growth conditions

foliar spraying Kerman natural mineral biochar Before fertility and birth of plants, it provides suitable conditions for their growth and development

Revealing features

Better absorption of nutrients and revealing the characteristics of leaves using Kerman natural mineral biochar improves

Increase production

Kerman natural mineral biochar By increasing the quality and ability of nutritional absorption of leaves, it increases the fertility and productivity of plants

The effect of foliar application and soil application Kerman natural mineral biochar

Increasing the fertility and germination of pollen grains

Kerman natural mineral biochar It increases the protein content and germination power in the pollen grains of plants and improves their quality

Strengthen the root system

Foliar spraying and soil application Kerman natural mineral biochar It increases the growth and strengthens the root system of plants

Effect Kerman natural mineral biochar on the absorption of nutrients

Increased absorption of nutrients

Kerman natural mineral biochar It increases the absorption of nutrients needed by plants from the soil and increases the reproductive growth of plants

تراکم با بیوچار

Increase performance

Kerman natural mineral biochar It can increase the performance of plants and crops and improve their growth environment

Effect Kerman natural mineral biochar on environmental stresses in plants

1

Resistance to thermal stress

Kerman natural mineral biochar
It increases the resistance of
plants to heat stress and protects
them

2

Resistance to soil salinity

using _ Kerman natural mineral
biochar It causes resistance to
soil salinity and increases the
health of plants

3

Reducing biological stress

Kerman natural mineral biochar
It can help plants to fight
biological stresses such as
diseases and pests

The effect of Kerman's mineral bio-environment on greenness and chlorophyll increase

Increase in chlorophyll levels

Kerman natural mineral biochar It increases the chlorophyll in the leaves and increases the greenness of the plants

Kerman natural mineral biochar It can change soil pH and cation exchange capacity and affect nutrient solubility and availability

Sufficient nutrient availability can support chlorophyll synthesis and lead to better greening of plant foliage

the effect Kerman natural mineral biochar in the development and increase of root growth

1

Stronger roots

using _ Kerman natural mineral biochar
It can lead to the growth of stronger
roots and more plants

2

Increase of micro roots

Kerman natural mineral biochar It
increases the number of micro-roots and
increases the absorption level of the
plant

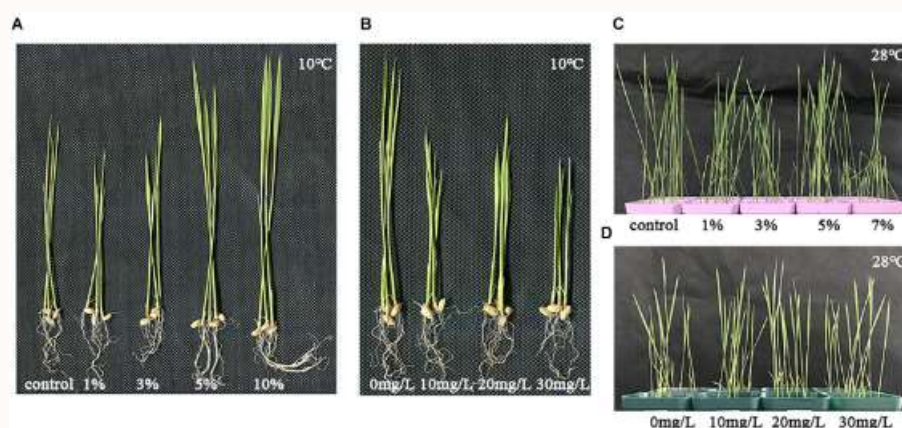

the effect Kerman natural mineral biochar on wood vessels and phloem vessels

during _ Kerman natural mineral biochar added to soil, can potentially affect the structure and function of xylem and phloem in plants through its effects on soil properties and plant health

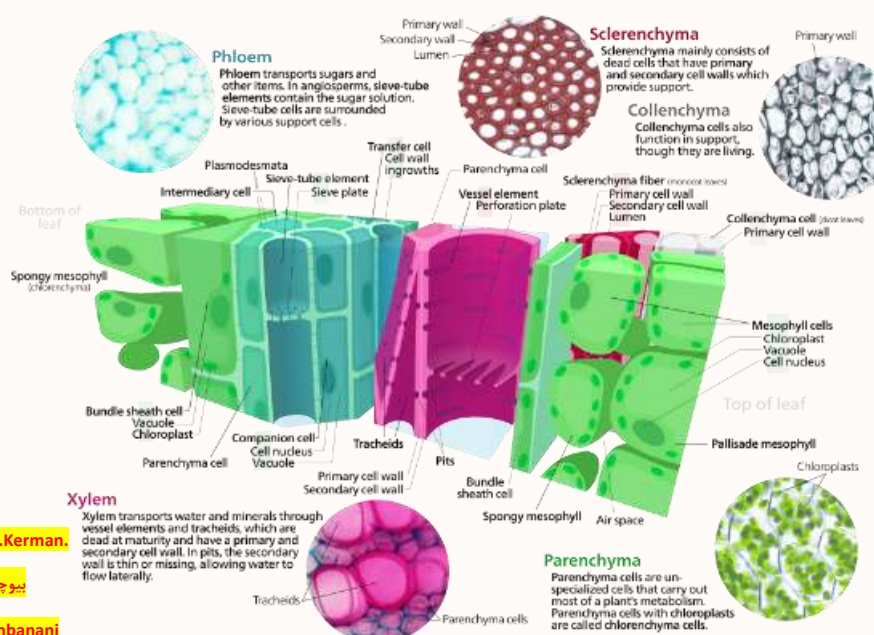

Plant health and resistance to stress

Amended soil with Kerman natural mineral biochar It is associated with improving plant health and resistance to stress. This can affect the growth and maintenance of xylem and phloem, as they are crucial for transporting water, nutrients and signaling molecules throughout the plant.

Continued growth of blood vessels

Optimum absorption of nutrients can have indirect effects on growth and function of xylem and phloem. Kerman natural mineral biochar It causes the continuation of growth and development of plant vessels and tissues and protects them
