

Meloidogyne spp.

In the name of Allah

Composition biologic Kerman natural mineral biochar a solution To control plant parasitic nematodes

Control of plant parasitic nematodes including root knot
nematodes in different plants using Kerman natural mineral
biochar Possible is acceptable

By Mr. Engineer Mohammad Majidi Kouh Banani

Root-knot nematode problems

1

Root knot nematode

This nematode can damage the growth and development of plants and reduce their performance

2

Risks for the root system

The activity of this nematode can cause problems for the root system of plants

3

Dilemma for farmers

Nematodes of the genus *Meloidogyne* spp.

They are one of the limiting factors of cultivation in fields, gardens and greenhouses

effects Kerman natural mineral biochar In the control of root knot nematode

1

Reduction of nematode activity

Kerman natural mineral biochar It can help reduce the activity of root-knot nematode in the soil

2

Strengthening the soil structure

using _ Kerman natural mineral biochar It improves the structure and texture of the soil, which prevents the transmission of nematodes

3

Induction of systemic resistance

Application Kerman natural mineral biochar Increase the resistance of plants to nematodes

Creating induced resistance in the plant

Strengthening the plant's immune system

Kerman natural mineral biochar It can help strengthen the immune system of plants and protect them against nematode attacks by creating induced resistance

Reduction of disease symptoms

using Kerman natural mineral biochar It reduced the root knot nematode damage in pistachio trees and consumption Kerman natural mineral biochar At Pistachio garden does not control nematodes became *M. javanica*

Increase performance

Kerman natural mineral biochar It increased the yield of pistachio trees and increased crop production

Increase root growth

Strong roots

using _ Kerman natural mineral biochar It strengthens the roots of plants and increases the depth and development of micro roots

Absorption of nutrients

Kerman natural mineral biochar It can increase the ability of plant roots to absorb nutrients

Stress resistance

Improved roots act as an effective factor in making plants resistant to various stresses

Benefits of using Kerman natural mineral biochar In the control of root knot nematode

1

Reduce chemical dependency

using _ Kerman natural mineral biochar It leads to the reduction of dependence on chemical fertilizers and pesticides in agriculture

2

Environmental Protection

using _ Kerman natural mineral biochar It helps to protect the environment and underground water

3

Increase Productivity

using Kerman natural mineral biochar It increases productivity and reduces costs in agriculture

Conclusion and Recommendations

1

Conclusion

using _ Kerman natural mineral biochar Kouhbanan natural mineral to control the root knot nematode can significantly improve the performance and health of infected plants

2

Offers

Due to the problems of using chemical compounds, such as creating resistance in pathogenic agents, high levels of some toxins, salinity of agricultural lands, use of Kerman natural mineral biochar To An alternative to poisons that does not contain any chemicals or chemicals and is basically organic can be used.
